

C. Diff Screening Update

July 26, 2016

As determined by the Cdif Task Force, Med Exec Committee, and Infection Prevention the following screening changes will take effect July 27th:

- The first type 6 or 7 stool documented on the I & O flowsheet **by either an RN or a PCA** will generate an order for Cdif testing.
- The only bowel movement documentation remaining on either the ED Focused Assessment or A & I flowsheet is the last BM prior to admission. This may only be documented one time and will flow into the A & I from the ED Focused Assessment.
- Consistency options of “Stool prior to hospitalization-unknown consistency” and “Patient receiving bowel prep” have been removed.
