## Malnutrition Risk Screen in Patient Profile

Beginning on September 21<sup>st</sup>, 2016

Nurses will answer The Malnutrition Risk Screen questions in the **Patient Profile**. A score of 2 or greater indicates the patient is at risk of malnutrition. This screen will notify the Registered Dietitian to perform an assessment and provide recommendations for at risk patients.

<b>*Nutrition Risk Screen</b>					
Malnutrition Risk Screen (MST)	<input type="radio"/>				
Have you lost weight recently without trying?	<input type="radio"/> No	<input checked="" type="radio"/> Yes	<input type="radio"/> Unsure		
If yes, how much weight have you lost?	<input checked="" type="radio"/> 2-13 lb	<input type="radio"/> 14-23 lb	<input type="radio"/> 24-33 lb	<input type="radio"/> 34 lb or more	<input type="radio"/> Unsure
Have you been eating poorly because of a decreased appetite?	<input type="radio"/> No	<input checked="" type="radio"/> Yes			
Total (Score of 2 or more = patient at risk of malnutrition.)	<b>2</b>				
Food Practices/Restrictions	<input type="checkbox"/> Diabetic	<input type="checkbox"/> Kosher	<input type="checkbox"/> post-surgical bariatric diet	<input type="checkbox"/> vegetarian	<input type="checkbox"/>
