

Medication Reconciliation Optimization Pilot

On June 5th, a new process will be introduced in SCM for observation or inpatients admitted through the Irvine Emergency Department.

When a Visit Demographic order is entered for a patient in the Irvine Emergency Department, a new order and task will be created to alert Nursing or Pharmacy that the patient's home medication history should be obtained and documented in the OMR (Outpatient Medication Review).

If the task is seen on the eMAR or Worklist Manager, the patient's home medication history remains outstanding and must be collected.

Marking the task as done, indicates that the best possible home medication history has been obtained. This will create a communication order to the physician to alert them that Admission Medication Reconciliation is needed.
